Summary:

- Technical Artist and Gameplay Systems Developer with a background in architecture and a focus on real-time visual systems, shaders, gameplay-aware tools, UI implementation, and technical art pipelines for Unreal Engine and Unity.
- Experience building materials, VFX, rigs, animation systems, gameplay interactions, and tool-driven workflows across solo and team projects. Strong cross-disciplinary foundation spanning art, code, and design, with experience supporting production through asset integration, Blueprint systems, documentation, and technical problem solving.
- Proficient in Unreal Engine 5, Unity, Blender, C++, C#, Blueprint, HLSL/GLSL, 3ds Max, Substance Painter, and Adobe Creative Suite.

Relevant Education:

2024-2026:

Game Development Diploma

- **Algonquin College**, Ottawa, ON
- Specialization: Game Programming & 3D pipeline
- Dean's Honor List (6 Semesters) - **GPA: 3.99**
- **Game Assets:** 3D modeling, texturing, lighting, and exporting assets to real-time engines following professional pipelines.
- **Level Design:** Gameplay design, scripting, and iterative production from concept to playtesting using industry-standard tools.
- **Digital Imaging:** Creation of textures, sprite sheets, UI assets, and concept art using digital imaging software.
- **Game & Graphics Programming:** 3D math, rendering techniques, shaders, optimization, and GPU concepts with emphasis on clean code and documentation.
- **Studio Production:** Collaborative development workflows, asset pipelines, and production practices within game engines.

2013-2019:

Master's degree in Architecture

- **National School of Architecture**, Rabat, Morocco
- Specialization: 2D/3D modeling, Architecture visualization and Concept design
- **Second-Class** Honours degree
- **Architecture Studio:** Conceptualization, documentation, presentation, and project execution following professional pipelines.

- **Technical Drawing & Modeling (RGT):** Creation of precise layered drawings and 3D models with complex structural integration.

Relevant Experience:

2025-2026:

Capstone Project - Crown Of Anchors | Unreal Engine 5 | Team of 12

Role : **Technical Artist / UI Designer / Blueprint Programmer**

- Defined visual direction through Art Guide, concepts, storyboards, and production documentation.
- Designed and programmed the full UI system, including Concepts, layout, behavior, animation, helper systems, and gameplay integration.
- Built gameplay-driven board space systems with shader-based interactions, VFX, dissolve effects, and visual feedback.
- Developed technical solutions using materials and shaders including occlusion masking, distance-based fading, runtime virtual texturing, distance tiling, and cell bombing.
- Modeled, textured, rigged, animated, and integrated characters, props, board assets, foliage, and environment content.
- Supported gameplay systems, camera behaviors, asset integration, and Unreal Engine pipeline workflows.

2024-2025:

Mini Capstone Project - Whiskey Business | Unreal Engine 5 | Team of 6

Role : **Technical Artist / Gameplay & Tool Programmer**

- Created all four playable characters from modeling through rigging and shared animation systems.
- Built shader-based readability systems including toon shading, X-ray visibility, and outline effects using Custom Depth and Stencil.
- Implemented gameplay systems including dash, weapon carry/throw interactions, and C++ ragdoll recovery logic.
- Developed a procedural plank generation tool and contributed environment art, lighting, and VFX.
- Integrated weapons, sockets, animation notifies, and physics-driven combat interactions.

2024-2025:

Whispers of the Djinn | Unreal Engine 5 | Solo Project

Role : **Technical Artist / Game Programmer**

- Developed a shader-based reveal system driven by lantern light and material logic.
- Built multiplayer spawning, role assignment, and replicated interaction systems.
- Created prototype environments for gameplay, atmosphere, and stealth-focused level testing.
- Used the project as a research prototype for multiplayer systems, shaders, and technical art experimentation.

2022-2023:

Ties of Kin | **Unity** | Solo Project

Role : **Gameplay Programmer / Game Designer / Animator**

- Designed and implemented movement systems, systemic abilities, and environment interactions.
- Built gameplay feel systems including input buffering, coyote time, and chained traversal mechanics.
- Created hand-drawn animations, gameplay prototypes, and test levels to validate mechanics and level design.

Functional Skills:

Technical Art

- Shader development, materials, VFX, real-time visual systems
- Technical art pipelines, asset integration, optimization
- Tool development and gameplay-aware systems

Gameplay Systems

- Blueprint systems, C++, C#, gameplay programming
- Multiplayer replication, interaction systems, prototyping
- UI systems and gameplay-supporting tools

Rigging & Animation

- Character rigging, animation systems, shared rigs
- Unreal/Unity integration workflows
- Technical problem solving for animation pipelines

Art & Content

- Modeling, texturing, environment art
- Stylized materials and hand-painted workflows
- Art direction, documentation, and production support

Other:

- Trilingual: **French, English** and **Arabic**

Employment History:

2024-2026 : **Retail Associate** | Rogers communication | **Ottawa** | Ontario

2019-2024: **Architect** - Project Manager | Ouchen's Studio | **Rabat** | Morocco

2019-2021: **Freelancer Graphic Designer** | Anything App | **Rabat** | Morocco

2017-2019: **Retail Supervisor** - Events Manager/Host | Kalitess Agency | **Rabat** | Morocco
